3	fig1.jpg		The image is a multi-panel scientific figure illustrating cardiac and circulatory system models. Panel A shows two images: a CT scan of a heart and a segmented heart model highlighted in blue. Panel B presents three 3D heart models with color gradients indicating normalized magnitude values, ranging from blue (low) to red (high). Panel C displays six 3D heart models with color coding representing different parameters, with a scale from blue to red. Panel D is a detailed flow chart of the pulmonary and systemic circulation, featuring various components like resistors, capacitors, and inductors, labeled with symbols and equations. The chart includes pathways for blood flow, indicated by arrows, and sections for coronary circulation.
11	fig1.jpg		Diagram illustrating cardiac function through graphs and anatomical heart models. Panel A: Graph showing pressure changes over time with various pressure curves labeled, including p_{at}^l, p_{at}^r, p_{at}^r, and p_{pul}. Panel B: Graph depicting flow rates and other related metrics, with curves labeled Q_{at}^l, Q_{at}^r, Q_{at}^r, and Q_v^r. Panel C: Series of heart models showing velocity magnitudes at different time points, with
